Set up 2-factor authentication in 10 minutes

Looking to secure access to your company data in no time? ESET Secure Authentication gives your people super-easy secure access from anywhere.

You can use ESET Secure Authentication for:
- Accessing your company’s VPN
- Protecting sign in to an operating system
- Web/cloud services such as Office 365 and Google Apps
- Outlook Web Access (OWA)
- Exchange Control Panel 2010 & Exchange Administrator Center 2013
- and more

This is how you can quickly protect your VPN:

1. **Run the ESET Secure Authentication Installer**
   - Run the installer
   - Select all allowed components
   - Finish the installation
   - **Time:** 00:00 - 02:00 min

2. **Set up ESET Secure Authentication**
   - Launch the ESET Secure Authentication admin console from Start -> Administrative tools
   - Enter your license details
   - Set up the ESET Secure Authentication RADIUS Server
   - **Time:** 02:00 - 04:00 min

3. **Configure your VPN**
   - Configure your VPN device for two-factor authentication
   - **Time:** 04:00 - 06:00 min

4. **Enable users**
   - Select the user in ADUC
   - Set their mobile number and click “Send Application”
   - User receives a text message and the application installs in a click
   - **Time:** 06:00 - 08:00 min

5. **User actions and VPN login**
   - Connect to your VPN
   - Generate a one-time password on your mobile phone (without internet connection)
   - Log in using static password and generated one-time password
   - **Time:** 08:00 - 10:00 min
