SECURE AUTHENTICATION

Single-tap, mobile-based authentication helps secure access to your data and supports compliance requirements.
What is multi-factor authentication?

Multi-factor authentication (MFA), also known as two-factor authentication (2FA) is an authentication method which requires two independent pieces of information to verify a user’s identity. 2FA is much stronger than traditional, static password or PIN authentication. By complementing the traditional authentication with a dynamic second factor, it effectively reduces the risk of data breaches caused by weak or leaked passwords.

ESET Secure Authentication provides an easy way for businesses of all sizes to implement MFA across commonly utilized systems such as VPNs, Remote Desktop, Office 365, Outlook Web Access, operating system login and more.
Why multi-factor authentication?

Not only can employees utilize the same password across multiple websites and applications, they sometimes freely share their passwords with friends, family and co-workers.

POOR PASSWORD HYGIENE

The saying “Employees are your weakest link” comes from their potential to put your business at risk—for example, with poor password hygiene. Some workers use the same password across multiple sites and applications, and share passwords with friends and co-workers. Enforcing password policy can also be difficult, as employees often use variations of similar words or write passwords on sticky notes.

A multi-factor authentication solution protects business against poor password hygiene by implementing, on top of the regular password, an additional password by generating it on the employee’s phone. Having this solution in place prevents attackers from gaining access to your systems by guessing weak passwords.

DATA BREACHES

Implementing multi-factor authentication is an effective way to reduce data breaches. Not only does it protect against weak or stolen passwords, it can also be used to protect user log-ins and restrict privileges in order to prevent unauthorized access. One of the most common ways hackers can gain access to your company’s data is through weak or stolen passwords. In addition, to just protecting normal users logins to critical services, businesses can implement multi-factor authentication on all privilege escalation to prevent unauthorized administrative access.

By adding a multi-factor solution businesses make it much more difficult for hackers to gain access to your systems and ultimately compromise them.

COMPLIANCE

When it comes to compliance, most businesses first need to understand whether they are subject to compliance requirements. Next, they must review the specific requirements and which solutions need to be implemented. Several compliance regulations require the use of 2FA, including PCI-DSS and GLBA, while others simply encourage the use of stronger authentication methods.

Multi-factor authentication is no longer an optional solution for most businesses that handle credit cards or financial transaction, but a requirement. No matter what business you’re in, it’s wise to check whether secure authentication is either recommended or required.
Having this solution in place prevents attackers from gaining access to your systems by simply guessing a weak password.

One of the most common ways hackers gain access to your company's data is through weak or stolen passwords.
Authenticate with a single tap, with no need to retype the one-time password.
The ESET difference

INTEGRATES WITH ACTIVE DIRECTORY
ESET Secure Authentication integrates directly with Active Directory which makes setup and configuration quick and easy. Once installed, a new tab appears in a user’s properties that makes provisioning a single click. Due to its integration with Active Directory, no additional training or professional services are required to set up and deploy ESET Secure Authentication.

NO DEDICATED HARDWARE REQUIRED
All the costs of ESET Secure Authentication are built in as it requires no dedicated hardware. Simply install the 10MB application on any server and start provisioning.

WORKS WITH EXISTING SMARTPHONES
No need for special tokens or devices for employees. ESET Secure Authentication works with all types of smartphones.

SETS UP IN 10 MINUTES
Many development hours were put into the creation of ESET Secure Authentication to ensure that setup was as easy as possible. We set out to create an application that a small business with no IT staff could set up and configure. Whether a business has five users or 100,000 users, ESET Secure Authentication, with its ability to provision multiple users at the same time, keeps setup time to a minimum.

FULL SDK AND API INCLUDED
For enterprises or companies that want to do even more with ESET Secure Authentication, we include a full SDK and API that businesses can use to extend the functionality to fit their needs.

PUSH AUTHENTICATION
Lets you authenticate with a single tap, with no need to retype the one-time password. Works with iOS and Android phones.

“Single server install, ease of setup, integration with Active Directory and one of the major pluses, an application we could give our staff members so there was no need for constant SMSs. On top of this, the fact it works seamlessly with open VPN made us very happy as we didn’t have to change our VPN setup to accommodate the software.”

Tom Wright, IT Service Officer, Gardners Books
Use cases

Prevent data breaches

Every day, it seems another business is having to notify customers that a data breach has occurred.

**SOLUTION**

- Protect vulnerable communications such as Remote Desktop by adding multi-factor authentication.
- Add multi-factor authentication to all VPNs being utilized.
- Require multi-factor authentication in order to log in to devices that contain sensitive data.
- Protect sensitive data with ESET Endpoint Encryption.

**ESET PRODUCTS**

- ESET Secure Authentication
- ESET Endpoint Encryption

Verify user login process

Businesses utilize shared computers in shared workspaces and require verification on all parties logging in throughout the workday.

**SOLUTION**

- Implement multi-factor authentication for desktop logins on all devices in shared workspaces.

**ESET PRODUCTS**

- ESET Secure Authentication

Strengthen password protection

Users utilize the same passwords across multiple applications and web services, putting a business at risk.

**SOLUTION**

- Restrict access to company resources by leveraging multi-factor authentication.
- Requiring multi-factor authentication reduces the worry associated with shared or stolen passwords by requiring an OTP in addition to a password.

**ESET PRODUCTS**

- ESET Secure Authentication
Technical features and protected platforms

**PUSH AUTHENTICATION**
A single-tap authentication with all iOS, Android and Windows 10 mobile smartphones.

**OTHER WAYS TO AUTHENTICATE**
ESET Secure Authentication supports mobile applications, push notifications, hard tokens and SMS for OTP delivery, as well as custom methods.

**REMOTE MANAGEMENT**
Via the ESET Secure Authentication web console or Microsoft Management Console (MMC). Integrates with Active Directory for easy management, or works standalone for organizations without a Windows domain.

**PROTECTION SUPPORT**
Virtual Private Networks (VPN), Remote Desktop Protocol (RDP), Outlook Web Access (OWA), VMware Horizon View and Radius-based services are all natively supported by ESET Secure Authentication.

**CLOUD SUPPORT**
In addition to on-premise applications, ESET Secure Authentication also supports web/cloud services such as Google Apps and Microsoft ADFS 3.0 (including Office 365).

**ADDITIONAL OS PROTECTION**
Additional authentication for desktop logins and privilege escalation are also protected by multi-factor authentication.

**HARD TOKEN SUPPORT**
Even though hard tokens are not required, all event-based HOTP tokens that are OATH-compliant are supported.

**SUPPORTED VPNS**
About ESET

ESET—a global player in information security—has been named as the only challenger in the 2018 Gartner Magic Quadrant for Endpoint Protection Platforms.*

For more than 30 years, ESET has been developing industry-leading IT security software and services, delivering instant, comprehensive protection against evolving cybersecurity threats for businesses and consumers worldwide.

ESET is privately owned. With no debts and no loans, we have the freedom to do what needs to be done for the ultimate protection of all our customers.

ESET IN NUMBERS

110M +
users worldwide

400K+
business customers

200+
countries & territories

13
global R&D centers

ESET EMPLOYEES

ESET REVENUE

More than one-third of all ESET employees work in research & development

SOME OF OUR CUSTOMERS

**HONDA**
protected by ESET since 2011
license prolonged 3 times and expanded 2 times

**GREENPEACE**
protected by ESET since 2008
license prolonged/expanded 10 times

**Canon**
protected by ESET since 2016
more than 14,000 endpoints

**T...**
ISP security partner since 2008
2 million customer base

SOME OF OUR TOP AWARDS

"Given the good features for both anti-malware and manageability, and the global reach of customers and support, ESET should be on the shortlist for consideration in enterprise RFPs for anti-malware solutions."
